Senior Backend Engineer — Java · Spring Boot · Event-Driven Systems · Regulated Financial Services

Backend engineer with 10+ years building and scaling Java/Spring Boot services for regulated financial institutions — Scotiabank, DBS, UBS. Led a monolith-to-microservices IAM transformation that became the reference architecture for regional teams across two markets and built an event-driven platform delivering MiFID II trade reporting to regulators in under five minutes. Strongest on the security and reliability edges: OAuth 2.0/JWT, 2-way-SSL FIX integration, Kafka/Avro streaming, and JVM performance triage in production. Built custom AI code-review tooling — Copilot Skills that generate tests, flag security risks, and verify regulatory logic before human review.

SKILLS & HONORS

Key Technical Skills

• **Programming Languages**: Java 17/21, SQL, JavaScript

• **Frameworks & Libraries**: Spring Boot, Spring Data JPA (Hibernate), Spring Security, Spring Cloud, Spring Cloud Gateway, Junit, Mockito, ReactJS, QuickFixJ, SAML 2.0, OAuth, JWT

• **Database**: MySQL, Oracle, MS-SQL, PostgreSQL, AWS DynamoDB (NoSQL), Redis (NoSQL)

• **Tools**: Kubernetes, Helm charts, Docker, Kafka, J-Meter, Java VisualVM, Eclipse Memory Analyzer Tool, Kibana, RabbitMQ, Grafana, AppDynamics, Git, Kong API Gateway, Maven, IntelliJ, JIRA, Confluence, IntelliJ JVM Profiling, Apache Airflow, ArgoCD, Elasticsearch

• **Platforms**: PCF, AWS, Azure

• **Methodologies**: Agile (Scrum), Domain Driven Development, Test Driven Development, Event Driven Architecture, RESTful API design

• **AI-Assisted Development**: GitHub Copilot (development, production debugging), custom Copilot review Skills, Claude Code (for personal projects), mattpocock/skills

Professional Certifications/ Honors:

• Peer Recognition Award (DBS Bank)	2022
• Peer Recognition Award (DBS Bank)	2021
• AWS Certified Developer – Associate	2020
• OCA Java SE 7 Programmer	2015

WORK EXPERIENCE

Nov. 2024 – Jul. 2026 | Scotiabank | Software Developer

Project: Development of Regulatory and Compliance Reporting Service

• Scaled an event-driven Java/Spring Boot platform to process **20,000 daily trades and submit in under five minutes**, ensuring strict adherence to MiFID II regulatory SLAs.
• Engineered the **end-to-end FIX protocol integration** for MiFID II submissions (QuickFixJ over TCP, 2-way SSL), owning the lifecycle from initial spec through production rollout.
• **Resolved a long-standing production bottleneck** in a core reference service by implementing distributed cache jitter and payload reduction, eliminating peak-load timeouts.
• Built **custom GitHub Copilot PR-review Skills** to suggest test cases, flag security risks, and verify regulatory logic on pull requests, while driving team-wide Copilot adoption to accelerate BAU development and root-cause production issues.
• Orchestrated Apache Airflow (Python) data pipelines to reliably refresh critical upstream reference data and ensure accurate trade messaging.
• Managed containerized deployments using Kubernetes, Helm charts, ArgoCD, and Docker to streamline the release process for regulatory reporting services.

May. 2024 – Sep. 2024 | TCS | Associate Consultant

Project: Migration of on-premises services to cloud for UBS Wealth Management

• Analyzed an existing on-premises file storage service serving 50TB of files.

• Led and delivered an MVP application in Spring Boot using Azure Storage, Microsoft Entra-Id, **Azure Kubernetes Service (AKS)** to replicate data governance, security, WORM (retention lock), data versioning to convince management to use Azure Blob Storage in place of on-premises solution.
• Introduced data cycle policies to **reduce the yearly cost of storage and maintenance by 30%**.
• The Spring Boot MVP application also covered replacing existing on-premises **Elasticsearch** with Azure AI Search including edge cases like re-indexing queries using 'Alias'.

Aug. 2021 – May 2024 | BeyondSoft International | Senior Software Developer

Project: IAM microservice transformation for DBS Bank

• Spearheaded the transition from on-prem monolith to microservices using Spring Boot, starting with the IAM service.
• Pioneered use of PCF, JWT, Redis and microservice architecture with **Kong API gateway** for regional teams.
• Modernized authentication and user session handling using **JWT (OAuth 2.0)** and **Redis**.
• Architected reusable libraries and Kafka clients for downstream services.
• Resolved high-CPU/Memory issues using **Java VisualVM** and **IntelliJ JVM profiling**.
• Deployed IAM services across 2 regions and facilitated production support and knowledge transfer.

Dec. 2020 – Aug. 2021 | Comtel Solutions | Senior Software Developer

Project: Report Generation API for DBS Bank

• Led an automation solution that transformed report generation processes from over 20 Excel formats, cutting processing time from three days to just 30 minutes while enhancing data accuracy and minimizing manual errors.
• Leveraged Spring Boot for efficient file handling and AWS cloud support using **ECS, RDS, SQS and Lambda**

Jun. 2019 – Oct 2020 | Allied World Assurance Company | Full-Stack Engineer

Project: APAC Travel Claims Submission Application

• Led a critical project that improved turn-around time for **Travel Claims (approx. 70,000/year) submission** and processing in **APAC region**.

• End-to-End development from requirement gathering for GUI development, application design, project development, programming and implementation of Claims submission online.

• Developed responsive front-end using ReactJS and Material UI.

• Leveraged **serverless AWS architecture (REST API)**, ensuring scalability and cost-effectiveness.

Jan. 2016 – May. 2019 | AdNovum Singapore Pte Ltd. | Software Engineer

Project: Portal development and Oracle IAM Support

• Development of Spring Boot MVC Web portal to allow custom SSO using SAML 2.0.

• Support and maintenance on existing Oracle OIM and OAM production systems.

• Implemented user stories from stakeholders and assisted in quickly resolving issues in production

Project: Straight Through Processing for UBS Bank

• Implemented features for Straight Through Processing (STP) initiative to automate process using BPM (Activiti).

• Implemented features in Spring Framework to develop asynchronous processing to efficiently handle transactions concurrently.

• Improved performance of the existing application by 5% using Spring Cache to store frequently used constant data from DB.

• Introduced new features for frontend in JavaScript, jQuery, HTML5, CSS and JSP, middle-layer of Spring MVC (3.x) and PL-SQL procedures for Oracle DB on WebSphere AS.

EDUCATION

Bachelors (Hons.) Degree in Electrical and Electronics Engineering | Nanyang Technological University (Singapore)
Diploma in Electronics | Temasek Polytechnic (Singapore)
